Signal Advance, Inc. (OTC: SIGL)
Current Report – Material Event: Cyber Incident

Date of discovery: September 27, 2025
Report date: October 1, 2025

Summary
On September 27, 2025, Signal Advance, Inc. detected a ransomware encryption event affecting four R&D simulation workstations and connected storage. The server's event log indicated that the **ransomware event duration was only a few minutes**.

Impact

- **Operations:** Temporary disruption to R&D simulation workflows; other operations continued.
- **Data:** No **sensitive personal information** was stored on the affected systems. The Company has **no evidence of data exfiltration**, and the short duration is inconsistent with large-scale extraction.
- **Restoration:** Using unaffected backups/snapshots, the Company has **restored the majority of models, datasets, credentials, and working files**. Reconstruction of a small subset of research/financial working data is ongoing.

Remediation & status

- On discovery, affected assets were isolated, credentials were rotated, and write access to certain shares was temporarily disabled.
- Systems are being rebuilt from clean images; enhanced monitoring and hardening measures are in place.
- No ransom was paid. The Company has reported, or will report, the incident to appropriate authorities.

Financial reporting
The Company does **not** currently expect a material long-term impact. If timing of quarterly financial reporting is affected by reconstruction of workpapers, the Company will provide an update.

Forward-looking statements
This report includes forward-looking statements regarding the scope, impact, and remediation of the incident. Actual results may differ. The Company undertakes no obligation to update these statements except as required by law.
